Dear Mr. Niranjan,

The global pandemic of the 2019-nCoV acute respiratory disease, commonly known as COVID-19, requires a global response and reaction from governments and associated entities across the globe. This is a unique time for humanity to bind together in overcoming this global threat. As a leading force in the UAE, G42 has responded with the construction of the first high throughput PCR testing laboratory outside of China and your team was an integral part of the success of this facility.

On the 14th of March, 2020 the construction teams at began work at site in coordination with the design teams in an effort to complete works by the 28th of March. The structure and speed required for this project meant that we left the team at Mekar with insufficient time to build a very important piece of our laboratory operations, the two main Fresh Air Handling Units that provide the critical negative pressure environments that protect our lab staff.

I was provided your telephone number to call to discuss the construction timeline with yourself and your team, and was beside myself when you committed your full resources to finishing this large work 2 days before you had initially informed the contractor you could deliver. Your constant updates gave my senior management comfort in knowing that the main heart of our operations would be arriving well protected from the weather with the teams ready to construct and support the installation on site.
Without the efforts from the Mekar team, we would not have been able to achieve this critical deadline of building this high output laboratory in a mere 14 days. The news of this achievement was received across the globe by a number of government health authorities and I want to thank you for the efforts to find the correct materials and to be able to construct such an impressive FAHU in such a short amount of time.

We cannot thank you enough for your support throughout this project and we look forward to working again with your team on our future laboratory and healthcare projects in the future.

Sincerely,

[Signature]
